run

Run Sbparser

1. git clone sbparser, yapb

- same directory location

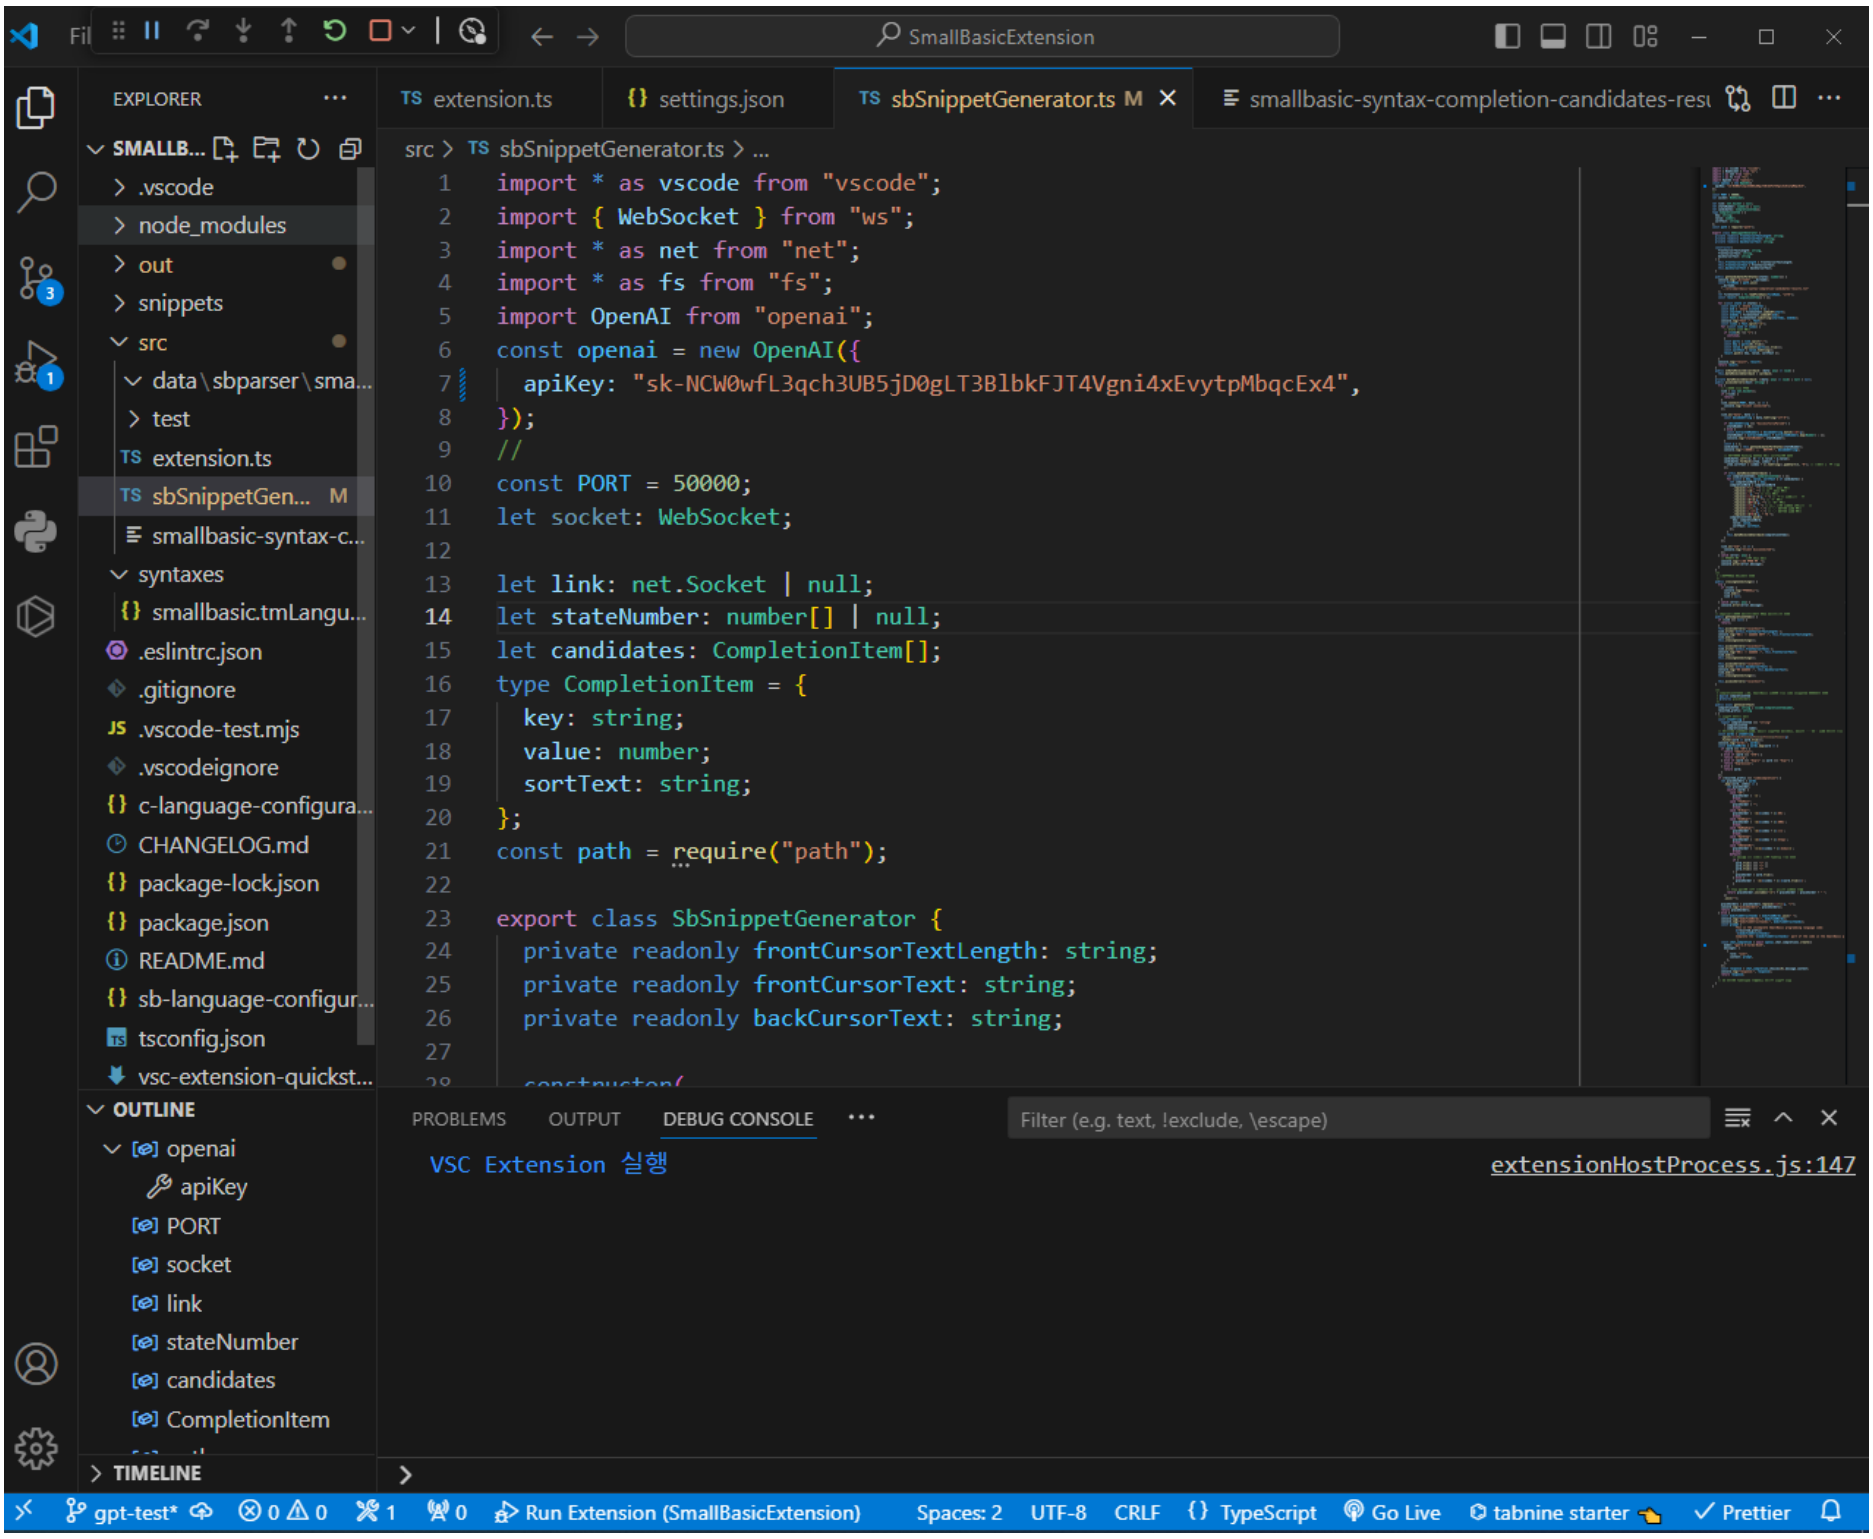

2. build sbparser, run sbparser

- `stack build`
- `stack run sbparser-exe.exe emacs`

```
        ←[0m
PS D:₩sbparser> stack run sbparser-exe.exe emacs
```

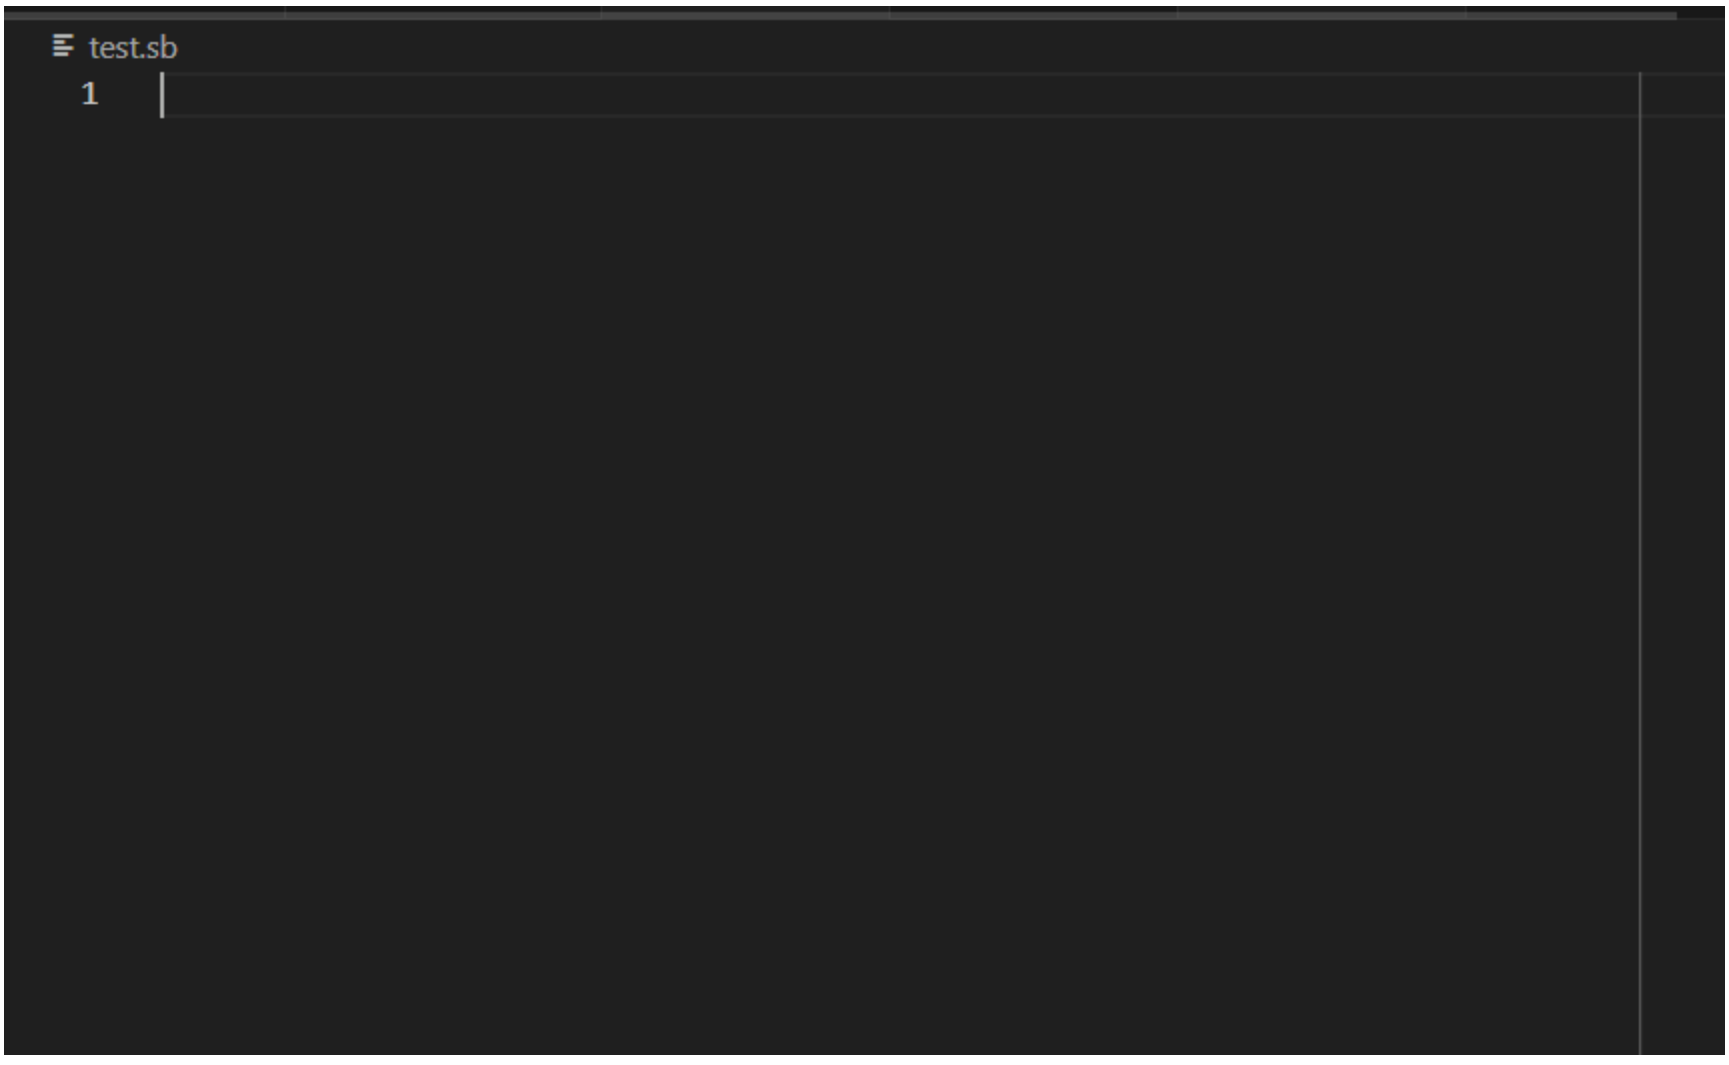

Run Extension

1. git clone
2. insert apiKey
3. go to Extension.ts file

4. Run → Start Debugging

- **ignore any messages that appear**
- **A new vscode window will appear**

5. make sb file

CapStone.sb

```
'----------------------------------------------------------------------------

TextWindow.ForegroundColor = "Yellow"
TextWindow.WriteLine("Hello World")

'----------------------------------------------------------------------------

TextWindow.Write("Enter temperature in Fahrenheit: ")
fahr = TextWindow.ReadNumber()
celsius = 5 * (fahr - 32) / 9
TextWindow.WriteLine("Temperature in Celsius is " + celsius)

'----------------------------------------------------------------------------

If (Clock.Hour < 12) Then
  TextWindow.WriteLine("Good Morning World")
EndIf
If (Clock.Hour >= 12) Then
  TextWindow.WriteLine("Good Evening World")
EndIf

'----------------------------------------------------------------------------

begin:
TextWindow.Write("Enter a number: ")
num = TextWindow.ReadNumber()
remainder = Math.Remainder(num, 2)
If (remainder = 0) Then
  TextWindow.WriteLine("The number is Even")
Else
  TextWindow.WriteLine("The number is Odd")
EndIf
Goto begin

'----------------------------------------------------------------------------

For i = 10 To 1 Step -1
  TextWindow.WriteLine(i)
EndFor
```

Start

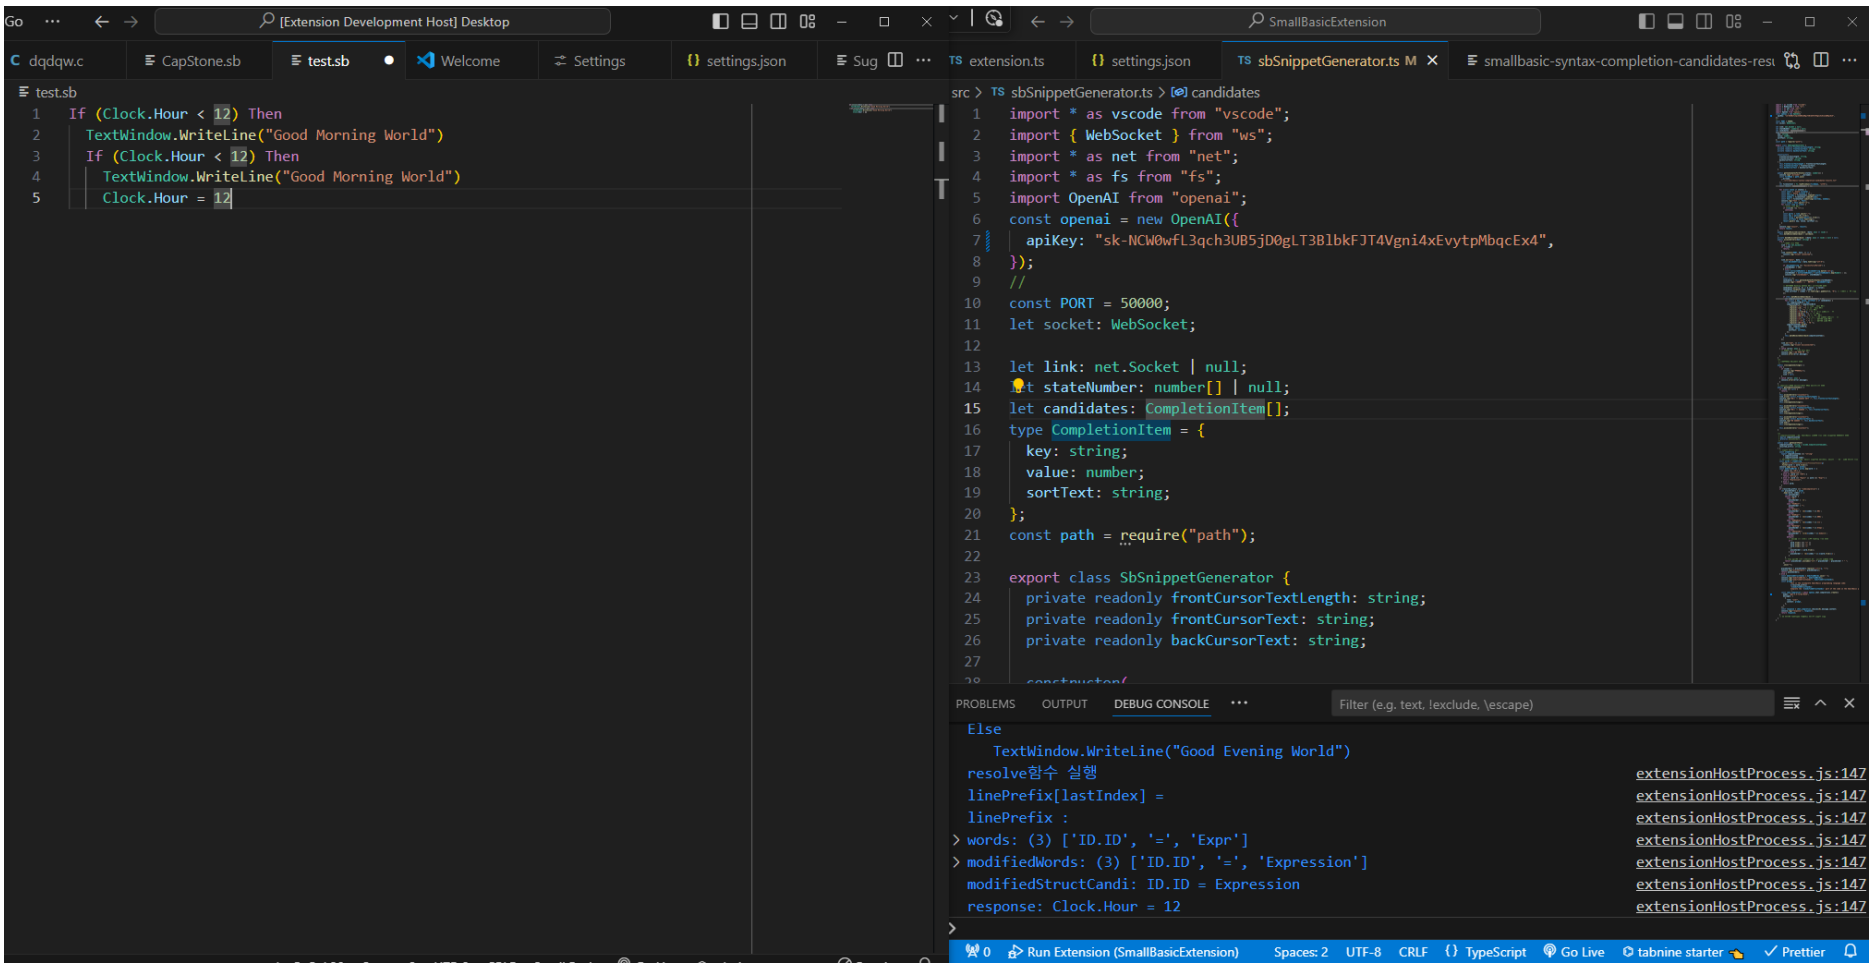

Candidate Code Completion

hotkey : Ctrl + Space

Prompt Code Completion

have to write some code

hotkey : ctrl + shift + o

Prompt code complication has several pre-cautions

0. You have to hit the code to some extent for it to work normally.

1. Instead of selecting cadidate by mouse click, select by keyboard keypad down.

2. Prompt code complication has several caveats.

Fine-tuning Code Completion

hotkey : ctrl + shift + I
